

## Health Protection

### Infant Immunisations

(1)

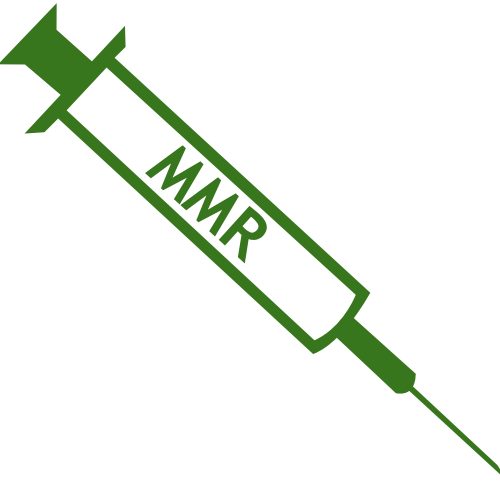

97.2% of children in Wiltshire during 2015/16 received their 3rd dose of DTaP/IPV/Hib by their 2nd birthday. This is higher than England which managed to vaccinate 95.2%

(1)

90.7% of children in Wiltshire during 2015/16 received their 2nd dose of MMR by their 5th birthday. This is higher than England which managed to immunise 88.2%.

However, Wiltshire's MMR coverage is below the 95% target.

### Flu vaccinations

(2)

49.3% of those under 65 deemed at risk of flu were vaccinated during 2016/17 in Wiltshire. This is slightly more than the national vaccination percentage.

(2)

72% Of those aged 65 and over in Wiltshire and 70.5% in England were vaccinated in 2016/17.

This is below the 75% target Public Health England has set for this age range.

## Health Protection

### Cancer Screening<sup>(1)</sup>

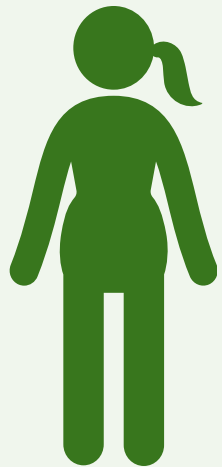

In 2016 Wiltshire screened more than the national percentage of the population for:

bowel cancer  
(62.3% compared to 57.9%)

cervical cancer  
(76.3% compared to 72.7%)

breast cancer  
(78.2% compared to 75.5%)

There has been a national and local downward trend in the percentage of women screened for cervical cancer.

### NHS Health Checks

Since 2013/14 82.8% of Wiltshire's<sup>(2)</sup> eligible population have been offered a health check. This means that Wiltshire is on track to have invited 100% of the eligible population in the first 5 year cycle.

Of those who were offered a health check 46.1% in Wiltshire have had a health check. This is significantly less than England (48.9%).
